SUMMARY

Senior Software Engineer with 3+ years of experience, my core expertise lies in backend development using **.NET Framework, ASP.NET, MQTT, Azure, and Terraform**. Adept at applying SOLID principles to build scalable, future-proof applications. As a dedicated and disciplined team player, I bring robust skills in **software design, development, and support**.

TECHNICAL SKILLS

Skills: REST APIs, C#, ASP.NET, .NET Framework, SignalR, Asynchronous Programming, Plugin Architecture, SQL, Database Management, C/C++, Socket Programming, HTTP/HTTPS, MQTT, HTML, CSS, Javascript, Azure, Terraform

Tools: Visual Studio, Visual Studio Code, Postman, MS SQL Server Management Studio, Mosquitto, OpenSSL

Experience & Projects

Senior Software Engineer

Dover India

April 2025 – Present

Bangalore, IN

CoLOS 7.0

- Packaging Logistic OS with capabilities like multi-site, centrally configurable, high availability and deployable on the cloud.
- Designed and developed various CoLOS services like Station, Logbook and Role Management Services, Device Status Service, etc that involved adding RESTful APIs and implementing SignalR based event driven architecture.
- Developed database layer for Central CoLOS, supporting diverse RDBMS (e.g., SQL Server, PostgreSQL) for services data.
- Created plugin-based Windows application used for performance comparison between CoLOS 6.x and 7.x services.

EdgeAgent

- Built an asynchronous MQTT and SignalR client based on parallel programming acting as a middle entity for communication between the MQTT broker and CoLOS service. Robust message transmitter that stores messages in database.
- Developed priority based local messaging queue that deletes messages from database upon acknowledgment from peer.
- Secured connection between EdgeAgent and MQTT broker using certificates and mutual TLS with topic wise access control.

Software Engineer

Dover India

July 2022 – March 2025

Bangalore, IN

RealTime Driver

- Developed C++ RealTime library providing functionality to create TCP sockets, shared memory channels and SQL handlers.
- Developed 3 processes using the RealTime library, used for job selection in an assembly line under 50ms time constraints.
- Developed flexible UI to add RealTime process to CoLOS, which reads configuration fields from XML utilizing propertyGrid.

EDL 3.0

- Designed EDL 3.0 to abstract license generation and parts population across multiple products, enabling seamless addition of new products in the future through simple database and XML configuration.
- Led a 3-member team to deliver a new modular UI and required Web APIs with successful data migration to new DB schema.
- Collaborated with a cross-functional team to automate entitlement management and integrated notification services.

CoLOS 6.x and EDL 2.x

- Supported CoLOS 6.x by delivering various business opportunities, improvements, bug fixes including Dotcode support for 9750 printer, verb emulator to add Demo/Internal field, font styles loadup for TTF fonts, etc.
- Delivered improvements and bug fixes for EDL 2.x like enhancing search page, dynamic tooltips loadup, order details for various pages, reset history, new user role, full part numbers display, etc. involving changes in Web APIs and frontend.

Software Engineering Intern, Dover India

Jan 2022 – June 2022

- Delivered an automated solution with detailed documentation for managing virtual machines in Azure using Terraform.
- Created policies for VM deployments, ensuring compliance with cost-saving measures, thus saving costs by 40%.

Education

Zakir Husain College of Engineering and Technology, AMU

2018 – 2022

- Bachelor of Technology in Computer Engineering (Hons) CPI: 9.039/10.0

Aligarh, India

Achievements and Activities

Specialist at [Codeforces](#), solved 600+ problems (max rating 1435).

500+ Score on [GeeksForGeeks](#), 100+ problems solved on [Leetcode](#), 7 Kyu on [AtCoder](#) (max rating 663).
